User Manual (Touch Screen controller)

Attention

Thank you for choosing our product, we shall be more than glad to service you. For you to better operate this product and to prevent accidents due to misoperation, please read carefully this user manual before carrying out any installation or operation, also please pay special attention to the warning, prohibition and attention instructions. We are continuously supplementing and upgrading this user manual to better service for you!

Part 1. Before Use

1. Attentions

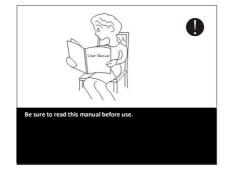

Warning Caution Prohibition

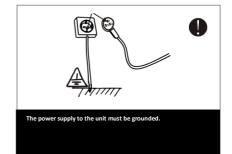

children, with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be super vised to ensure that they do not play with the appliance.

Be sure to read this manual before use. The installation, dismantle mentand maintenance of the unit must be performed by qualified personnel. It is forbidden to do any changes to the structure of the unit. Otherwise injury of personor unit damage might happen.

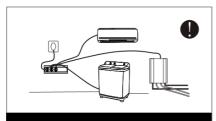

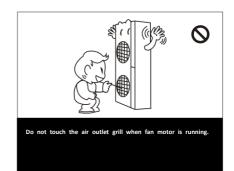

Make sure the power supply to the heat pump unit is off Before any operations are done on the unit. When the power cord gets looser or is damaged, always get a qualified person to fix it.

environment.

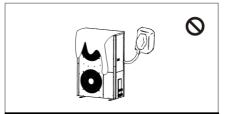

Use a dedicated socket for this unit, otherwise malfunction may occur.

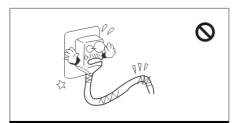

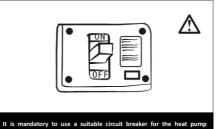

Water or any kind of liquid is strictly forbidden to be poured into the product, or may case creepage or breakdown of the product.

When running the unit, never cover clothes, plastic cloth or any other material that block ventilation on the product which will lead to low efficiency or even non-operation of this unit.

When the power cord gets loose or is damaged, always get a qualified person to fix it.

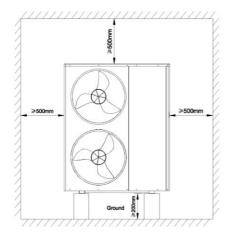

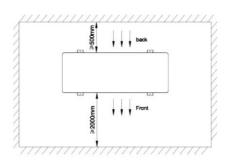

It is mandatory to use a suitable circuit breaker for the heat pump and make sure the power supply to the heater corresponds to the specifications. Otherwise the unit might be damaged.

2. Installation

(1) Heat pump installation location and attentions

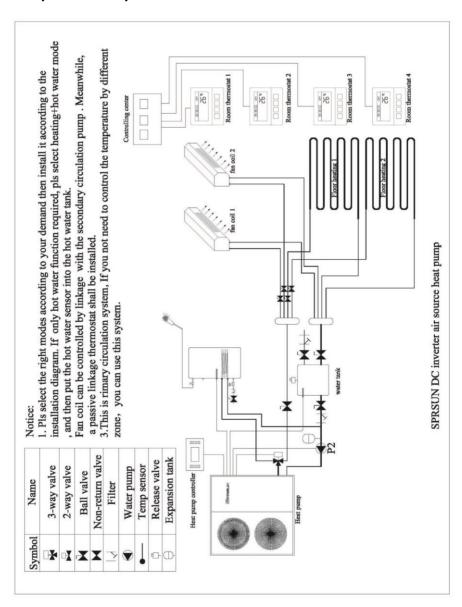

- * Heat pump is not allowed to be installed in the place where combustible gas may leaks.
- * Heat pump is not allowed to be installed in the place where there is oil or corrosion gas released.
- * Heat pump should be installed in a open space, and good ventilating.
- * Heat pump each side to wall or barrel should be keep certain distance, air outlet to barrel distance should ≥2m, air inlet distance to wall or barrel≥0.5m, bottom distance to ground ≥0.5m, other side distance should be enough for installation or repairing.
- * Heat pump should be installed on concrete basic or steel bracket, and anti-shock pad should be put between heat pump and basic or bracket. Then use expansion bolt to fix heat pump on bracket.
- * Water drainage pipe and ditch should be set around heat pump and water pipes and water tank. When testing or repairing, maybe need drain plenty of water, and when heat pump is working, there are some condensed water flow down.

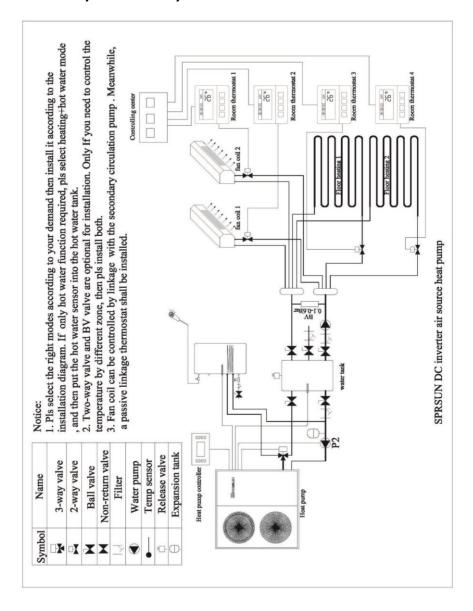

(2) Installation diagram and tips (for reference only, installation shall be based on actual project demand)

Primary circulation system

Secondary circulation system

Tips for installation related to the water pipe part:

- Install a valve at the highest point of each water circulations for releasing air from water system.
- A Y-shape filter is very important in front of circulating water pump of heat pump.
- If more pieces heat pump installed in one water pipe system, the connection of these heat pumps can't be in series, only can be in parallel or independent.

(3) Pre-start up

- 1 Checking before pre-start up
- Check if the water pipe are connected well and if there is any leakage. The water supply valve are open.
- Make sure the water flow is enough and meet the demand of the heat pump selected and water flow smoothly without air. In cold area, pls make sure that the water flow is without freezing
- Check if the power cable is connected well and properly grounded.
- Check if fan blade is blocked by the fixing plate of fan blade and fan blade protecting grill.
- Check if the tank has been filled with water or enough water volume that can meet the demand of heat pump running

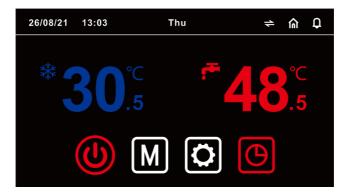

If everything above is OK, the unit can start up. If any of them fails, please improve it.

2 Pre-start up

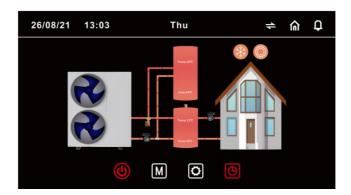

- After check completely and confirm no problem for installation, the unit can be power to start up.
- After connect power supply, heat pump delay 3mins to start. Check carefully
 is there is some abnormal noise or vibration or if the working current is
 normal or if water temp increasing is normal.
- After the unit is working properly for 10 minutes without any problem, then
 the pre-start up is usefully completed. If not, pls refer to Service and
 Maintenance Chapter to solve the problem.

Part 2. Use

Main interface

Dynamic

Turn on and off the machine, and it will display red when it is turned on.

Mode switch

Timing setting, there is a time set display is red

Current cooling temperature

Current hot water temperature

Current heating temperature

Simple graph and dynamic switching

Home button

View historical faults

1. Turn on/off

In the off state, the colour of the switch key is white, Press

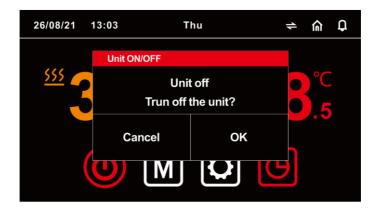

A selection box will pop up, select OK to power on. In the power-on state, the

color of the switch key is red, press OK to shut down.

A selection box will pop up, select

2. Mode switching

Attention: Only switch modes when the unit is turned off.

2.1 Press A selection box pops up. In Mode choose Heating, Cooling, Hot water, Hot water+cooling, Hot water+heat.

2.2 In Mode, select **Fan mode:** where you can select different operating modes.

Eco mode - economic mode, the heat pump can automatically output capacity as required according to the ambient temperature;

Night mode, the heat pump has low output capacity from 8 pm to 8 am, and high output at other times;

Day mode, the compressor outputs according to the maximum capacity;

Pressure, test mode, the heat pump outputs according to the test capacity.

- 3. Temperature and temperature difference settings.
- 4. Click on any current temperature to bring up a selection box:

Cooling setp: cooling setting temperature.

Heating setp: heating setting temperature

Temp.diff: when cooling or heating. The difference between the unit restart temperature and the set temperature after standby.

Hotwater setp: hot water setting temperature

Temp.diff: in hot water mode, The difference between the unit restart temperature and the set temperature after standby.

5. TimeZone/CLOCK

A selection box pops up

Timezone on off:

Enabl - Turn on the timer switch function, the unit can be set to switch on and off time for one week after it is switched on;

Disabl - Turn off the timer switch function.

Timezone setpoint:

Enabl - Turn on the timer temperature setting function, the unit can set different temperatures in four time periods of a day after it is turned on;

Disabl - Turn off the timer setting temperature function.

Timezone on off

Timing setting interface, under ON is the power-on time, and under OFF is the off-time.

Timezone setpoint Timing setting temperature interface;

Timezone1 is the start time of the first time period, **Timezong2** is the cut-off time of the first time period and the start time of the second time period, and so on.

Cooling temp、 Heating temp、 Tank temp Set the temperature for cooling, heating, and hot water for the corresponding time period

Set timezo	ne O	N/OFF			×
	Timel	oand 1	Timel	band 2	
	ON	OFF	ON	OFF	
Monday	0:0	0:0	0:0	0:0	
Tuesday	0:0	0:0	0:0	0:0	
Wednesday	0:0	0:0	0:0	0:0	
Thyrsday	0:0	0:0	0:0	0:0	
Friday	0:0	0:0	0:0	0:0	
Saturday	0:0	0:0	0:0	0:0	
Sunday	0:0	0:0	0:0	0:0	\odot

6. Input/Output

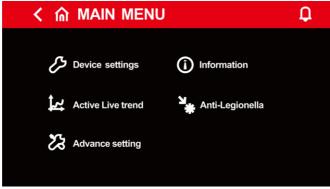

to access menu, press

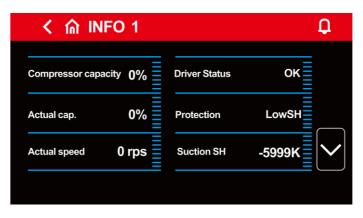

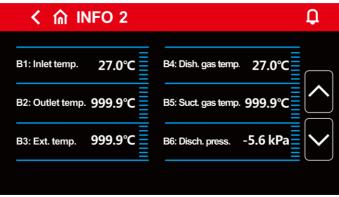

to select I/O mask,

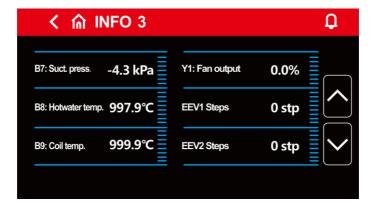

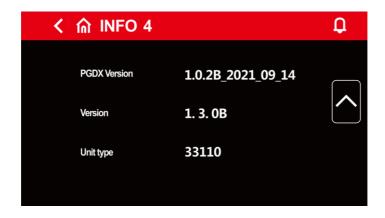

To Select, Water temperature/ Pressure/Frequency/ and so on.

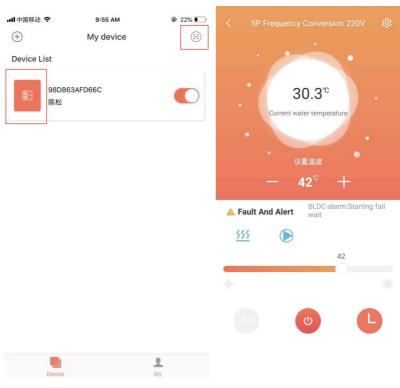

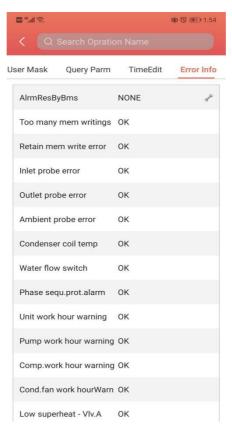

7. APP functions

6.1 Device Homepage

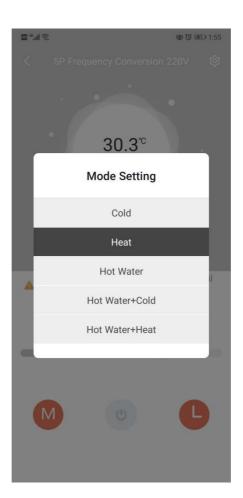

Explanation

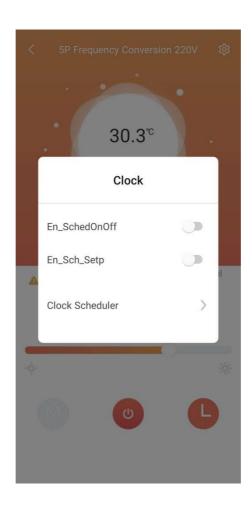

- 1) Click a device in the device list to enter this page.
- 2) The background color of the bubble indicates the current operating state of the device:
 - a. Gray indicates that the device is in the shutdown state, at this time, you can change the working mode, set the mode temperature, set the timing, or you can press the key to switch on and off.
 - b. Multicolor indicates that the device is turned on, each working mode corresponds to a different color, orange indicates heating mode, red indicates hot water mode, and blue indicates cooling mode.
 - c. When the device is in the power-on state, you can set the mode temperature, set the timer, press the key to switch on and off, but you can not set the working mode (that is, the working mode can only be set when the device is off)
- 3) The bubble shows the current temperature of the device.
- 4) Below the bubble is the set temperature of the device in the current operating mode.
- 5) Set the temperature is about +, button, Each click adds or subtracts the current setting value to the device.
- 6) Below the setting temperature is the Fault And Alert. When the device starts to alarm, the specific Alert reason will be displayed next to the yellow warning icon. In case of device Fault And Alert, the Fault And Alert content will be displayed on the right side of this area. Click this area to jump to the detailed Error Information.

- 7) Immediately below the fault alarm area, display the current working mode, heat pump, fan and compressor in sequence (corresponding blue icon when it is on, but not displayed when it is off).
- 8) The slide bar below is used to set the temperature in the current mode. Slide the slider left and right to set the allowable temperature in the current working mode.
- 9) The bottom three buttons are in order from left to right: working mode, device switching machine and device timing. When the current background is color, the working mode button cannot be clicked.
 - a. Click Work Mode to see the mode selection menu, and you can set the working mode of the device (black is the current setting mode of the device). The diagram as below:

- b. Click "on/off" and set "on/off" command to the device.
- c. Click the device Timer to see the Timer Settings menu. Click the Clock Schedule to set the device Timer function. The diagram below:

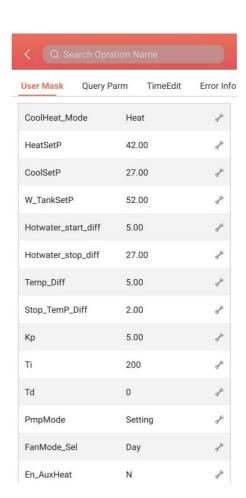

Detailed information of the units

Note:

- 1) Click this Main Interface menu on the upper right corner to enter this setting page.
- 2) Users with manufacturer rights can check all the functions , including:

User mask, defrost, other parameters, factory settings, manual control, query parameters, time edit, error info.

3) User with user rights , only can check part of the functions: User mask, query parameters, Time Edit , alarms.

8.

User setting parameter:

Parameter Name	е	Initial Value
Unit mode		Heating
Heating setp.		45℃
Cooling setp.		12℃
Hotwater setp.		50 ℃
Temp. diff.		5℃
Stop temp. diff.		0℃
Cool and heat mode Temp. diff.		5℃
Stop temp. diff.		2℃
Кр		5℃
Integral		200s
Differential		0s
Pump work		Interval
Pump Auto		Enable
Fan model		Daytime
Enable heater		Enable
Enable chassic/crack heater		Enable
Heater control-Comp. delay		50min
Heater control-Ext.temp.setp.		-15℃
Pump control	Delta temp. set.	5℃
Auto start		Enable

Part 3. Maintenance and repairing

1、Maintenance Tips

The heat pump unit is a highly automated equipment. The unit status check is carried out regularly during use. If the unit can be maintained and maintained for a long time and effectively, the unit's operational reliability and service life will be unexpectedly improved.

- 1. Users should pay attention to the use and maintenance of this unit: all safety protection devices in the unit are set before leaving the factory, do not adjust by yourself;
- 2. Always check whether the power supply and electrical system wiring of the unit is firm, whether the electrical components are malfunctioning, and if necessary, repair and replace them in time;
- 3. Always check the water system's hydration, the water tank safety valve, the liquid level controller and the exhaust device to work properly, so as to avoid the air circulation into the system and reduce the water circulation, thus affecting the unit's heating capacity and unit operation reliability;
- 4. The unit should be kept clean and dry and well ventilated. Regularly clean (1-2 months) air-side heat exchangers to maintain good heat transfer;
- 5. Always check the operation of each component of the unit, check the oil pipe at the pipe joint and the gas valve, and ensure that the refrigerant of the unit is not leaking;
- 6. Do not stack any debris around the unit to avoid blocking the air inlet and outlet. The unit should be clean and dry and well ventilated.
- 7. If the downtime is long, the water in the unit piping should be drained, and the power supply should be cut off and the protective cover should be placed. When running again, check the system thoroughly before starting up;

- 8. If the unit fails and the user cannot solve the problem, please inform the company's special maintenance department in order to send someone to repair it in time;
- 9. The main unit condenser cleaning, the company recommends using a 50 °C concentration of 15% hot oxalic acid to clean the condenser, start the host with a circulating water pump for 20 minutes, and finally rinse with tap water 3 times. (It is recommended to reserve a three-way interface when installing the pipe and seal one interface with a wire plug) in case of cleaning. Do not wash the condenser with a corrosive cleaning solution. The water tank needs to be removed after a period of use (usually two months, depending on local water quality).

9. Other problem and repairing

No	Error	Possible reason	Method
1	Heat pump doesn't run	Power supply cable is loose The fuse of power supply is fused.	 Cut off the power supply to check and repair. Change the fuse.
2	Heating capacity is too small	 Refrigerant is not enough Water system insulating is not good Air heat exchanger is dirty Water heat exchanger scaled 	1. Check leakage and repair and refill gas 2. Improve the insulation 3. Clean air heat exchanger 4. Clean water heat exchanger
3	Compressor doesn't run	 Power supply has error Cable connecting is loose Compressor is overheat 	 Check reason and solve Check loose and repair Check reason and repair
4	Compressor noise is loud	1. Expansion valve damaged lead to liquid entering compressor 2. The internal parts of compressor damaged 3. Compressor lack of oil	Change expansion valve Change compressor Compensate oil for compressor
5	Fan motor doesn't run	 Fan blade fixing screw is loose Fan motor damaged Fan motor capacitance damaged 	 Tight the screw Change fan motor Change the capacitance
6	Compressor run, but not heat	There is not refrigerant at all Compressor damaged	Check leakage and repair Change compressor

Warranty card

Product mod	del:		Bar code:	
Buyer		Address		
Invoice No.		Date		
Repair date	Repa	air record		Repairer

Terms of warranty:

- 1. Within warranty period, any problem because of quality, please contact us for support.
- 2. When repair needed, please show the warranty card and invoice of order or other proof.
- 3. We don't warranty problems caused by re-fitment or adding other function by user.
- 4. Warranty card and invoice or other purchasing proof will be invalid if alerted.
- 5. Please keep the warranty card and invoice or other purchasing proofs, we will need these for service purpose.
- 6. We will not provide free warranty for below conditions:
- (1) without proof;
- (2) errors caused by re-fitment or not correct operation;
- (3) damage caused by none professional people operating;
- (4) faulty by moving or falling;
- (5) faulty caused by natural disaster;
- (6) After the power failure, the water in the pipeline of the unit was not discharged, which caused the unit to freeze.
